Inductive proximity sensor VL1B series

# Common inductive DC 2 wire

## proximity sensors series - M12 size

## Highlights

#### Inductive sensor

When the metal conductive objects close to the magnetic field and reach the induction area, high-frequency alternating magnetic field generated by a LC oscillation circuit, which is composed of a coil wound on a ferrite, through the eddy current effect generated by internal of metal objects to achieve non-contact detection.

#### Standards

Inductive proximity switch is a low cost method for non-contact detection of metal objects, which is widely used in the following sectors, such as:

All inductive proximity sensors conform to IEC 60947-5-2.

#### Housing material

The housing material of sensor including nickel plated copper, also stainless steel and plastic with resistance of compression and temperature rapid change. Most of square sensor is plastic housing. These materials can also be used to produce square sensors with adjustable sensing surface or compact (small square) sensors. Such sensors can be used in the occasions of limited installation space or required large detection range.

Application

- Automotive Industry - Metallurgical sector - Machine tool sector - Robot industry - Conveyor system - Paper and printing industry - Mechanical Engineering

### Product parameters

#### Features:

- Diameter M12
- Sensing distance: P/N table
- Body material: Nickel plated brass
- Built-in electric protection
- Output: See P/N table
- Connection:
- PVC cable/2m; 2\*0.5mm²
   Power supply: 24V DC, 2 wires
